

ABSTRACT OF THE DISCLOSURE

Methods, apparatuses and systems for detecting a fraud event on a distributed network are disclosed. A fraud event is indicated if data analysis reveals that there is a lack of consistency between elements in the network.

1. A method for detecting a fraud event on a distributed network, comprising:
 receiving data from a distributed network;
 analyzing the data to determine if there is a lack of consistency between elements in the network;
 indicating a fraud event if the analysis reveals a lack of consistency between elements in the network.
